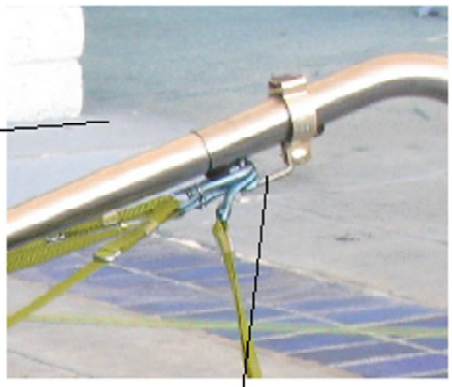
OMG – What IS all this stuff? Mini Harness 101



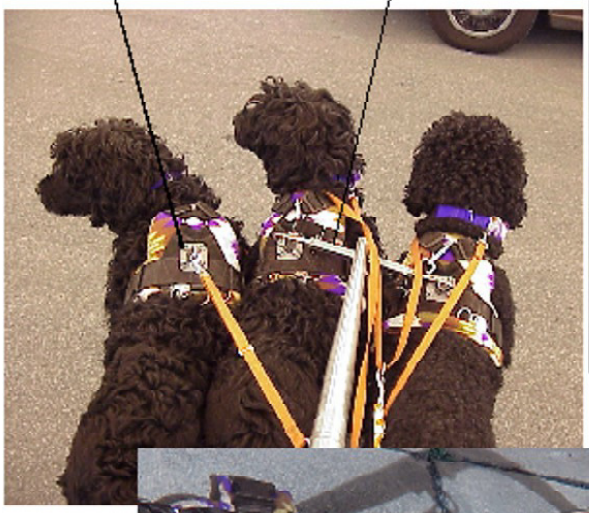
This is the "TRACE RING " where extra dogs can be hooked and where the strap from the belly-band is hooked. The new trace rings look a bit different than this one but work the same way

A shorter set of tracelettes are used to keep the dogs together at the front.

TRACELETTES – short pieces of webbing to attach dogs to the trace ring. You can see the outside dogs pulling them tight.

The HASP is the big ring on a plate mounted on the top of the harness where the Mini's tip connects

The 2-DOG HITCH – attaches to the tip of the dorsal bar allowing 2 dogs to be attached directly to the dorsal bar



The V-BRACE is a set of harness that connects to the TRACE RING and then out to the HASPS on each dog's harness . The straps on the V-BRACE are very tight, bracing the 2-Dog Hitch from being pulled forward or backwards if one dog pulls harder than the other.
